```
def read_address()  
    Read house_number  
    Read street  
    Read suburb  
    Read postcode as an integer in range 0-9999  
  
    Format the combination of house_number, street, suburb, postcode and  
    then assign it to formatted_address  
  
    return formatted_address  
end  
  
def read_name()  
    Read title  
    Read first_name  
    Read last_name  
  
    Format the combination of title, first_name, last_name and then assign  
    it to formatted_name  
  
    return formatted_name  
end  
  
def read_label()  
    name = read_name()  
    address = read_address()  
  
    Format the combination of name, address and then assign it to  
    formatted_label  
  
    return formatted_label  
end  
  
def read_message()  
    Read subject_line  
    Read content  
  
    Format the combination of subject_line, content and then assign it to  
    formatted_message  
  
    return formatted_message  
end  
  
def print_letter(label, message)  
    Format the combination of label, message and then assign it to  
    formatted_letter
```

```
        print formatted_letter to the terminal
    end

def main()
    label = read_label()
    message = read_message()
    print_letter(label, message)
end
```
